*Elgin's Travels in Turkey. Edition.*

### MEMORANDUM, &c.

IN the year 1799, when Lord Elgin was appointed his Majesty's Ambassador Extraordinary to the Ottoman Porte, he was in habits of frequent intercourse with Mr. Harrison, an architect of great eminence in the west of England, who had there given various very splendid proofs

of his professional talents, especially in a public building of Grecian architecture at Chester. Mr. Harrison had besides studied many years, and to great purpose, at Rome. Lord Elgin consulted him, therefore, on the benefits that might possibly be derived to the arts in this country, in case an opportunity could be found for studying minutely the architecture and sculpture of ancient Greece; and his opinion very decidedly was, that although we might possess exact measurements and designs of the buildings at Athens, yet a young artist could never form to himself an adequate conception of their minute details, combinations, and general effect, without having before him some such sensible representation of them as might be conveyed by *casts*. This advice, which laid the groundwork of Lord Elgin's pursuits in Greece, led to the further consideration, that, since the knowledge already possessed of these buildings

had been obtained under the peculiar disadvantages which the prejudices and jealousies of the Turks had ever thrown in the way of such attempts, any favourable circumstances which Lord Elgin's embassy might offer should be improved; and that not only modellers, but architects and draftsmen, should be employed, to rescue from oblivion, with the most accurate detail, whatever specimens of architecture and sculpture in Greece had still escaped the ravages of time, and the barbarism of conquerors.

On this suggestion, Lord Elgin proposed to his Majesty's Government, that they should send out English artists of known eminence, capable of collecting this information in the most perfect manner; but the prospect appeared of too doubtful an issue for ministers to engage in the expense attending it. Lord Elgin then endeavoured to engage some of these artists at his own charge; but the value

of their time was far beyond his means. When, however, he reached Sicily, on the recommendation of Sir William Hamilton, he was so fortunate as to prevail on Don Tita Lusieri, one of the best general painters in Europe, of great knowledge in the arts, infinite taste, and most scrupulously exact in copying any subject he is to represent, to undertake the execution of this plan; and Mr. Hamilton, who was then accompanying Lord Elgin to Constantinople, immediately went with M. Lusieri to Rome; where, in consequence of the disturbed state of Italy, they were enabled to engage two of the most eminent *formatori* to make the *madreformi* for the casts; Signior Balestra, a distinguished architect there, along with Ittar, a young man of promising talents, to undertake the architectural part of the plan; and one Theodore, a Calmouk, who during several years at Rome had shown himself equal to the

first masters in the design of the human figure.

After much difficulty, Lord Elgin obtained permission from the Turkish Government to establish these six artists at Athens; where they systematically prosecuted the business of their several departments during three years, under the general superintendance of M. Lusieri. They at length completed Lord Elgin's plan in all its parts.

Accordingly, every monument, of which there are any remains in Athens, has been thus most carefully and minutely measured; and, from the rough draughts of the architects, (all of which are preserved,) finished drawings have been made by them of the plans, elevations, and details of the most remarkable objects; in which the Calmouk has restored and inserted all the sculpture, with exquisite taste and ability. He has besides made accurate drawings of all the bas-reliefs on the several temples,

in the precise state of decay and mutilation in which they at present exist.

Most of the *bas-reliefs*, and nearly all the characteristic features of architecture, in the various monuments at Athens, have been moulded, and the moulds of them have been brought to London.

Besides the architecture and sculpture at Athens; all similar remains which could be traced through several other parts of Greece, have been measured and delineated, with the most scrupulous exactness, by the second architect, Ittar.

And picturesque views of Athens, of Constantinople, of various parts of Greece, and of the Islands of the Archipelago, have been executed by Don Tita Lusieri.

In the prosecution of this undertaking, the artists had the mortification of witnessing the very wilful devastation, to which all the sculpture, and even the architecture, were daily exposed, on the part of the Turks, and travellers: the

former equally influenced by mischief and by avarice; the latter from an anxiety to become possessed, each according to his means, of some relic, however small, of buildings or statues which had formed the pride of Greece. The Ionic Temple, on the Ilyssus, which, in Stuart's time, (about the year 1759,) was in tolerable preservation, had so entirely disappeared, that its foundation was no longer to be ascertained. Another temple, near Olympia, had shared a similar fate, within the recollection of many. The Temple of Minerva had been converted into a powder magazine, and was in great part shattered, from a shell falling upon it, during the bombardment of Athens, by the Venetians towards the end of the seventeenth century; and even this accident has not deterred the Turks from applying the beautiful Temple of Neptune and Erectheus to the same use, whereby it is still constantly exposed to

a similar fate. Many of the statues over the entrance of the Temple of Minerva, which had been thrown down by the explosion, had been pounded for mortar, because they offered the whitest marble within reach; and the parts of the modern fortification, and the miserable houses where this mortar had been so applied, are easily traced. In addition to these causes of degradation, the ignorant Turks will frequently climb up the ruined walls, and amuse themselves in defacing any sculpture they can reach; or in breaking columns, statues, or other remains of antiquity, in the fond expectation of finding within them some hidden treasures.

Under these circumstances, Lord Elgin felt himself irresistibly impelled to endeavour to preserve, by removal from Athens, any specimens of sculpture, he could, without injury, rescue from such impending ruin. He had, besides, another in-

ducement, and an example before him, in the conduct of the last French embassy sent to Turkey before the Revolution. French artists did then attempt to remove several of the sculptured ornaments from several edifices in the Acropolis, and particularly from the Parthenon. In lowering one of the metopes, the tackle failed, and it was dashed to pieces; one other object from the same temple was conveyed to France, where it is held in the highest estimation, and where it occupies a conspicuous place in the gallery of the Louvre.\* The same agents were remaining at Athens during Lord Elgin's embassy, waiting only the return of French influence at the Porte to renew their operations.

\* *Vide Dictionnaire des Beaux Arts*, par A. L. Millin, 1806, article *Parthenon*; and the *Memoir*, on the subject of a fragment of the frieze of that temple, brought by M. De Choiseuil Gouffier from Athens, and constituted national property during the French Revolution. The *Memoir* is published in M. Millan's *Monumens Antiques inedits*.

Actuated by these inducements, Lord Elgin made every exertion ; and the sacrifices he has made have been attended with such entire success, that he has brought to England, from the ruined temples at Athens, from the modern walls and fortifications, in which many fragments had been used as blocks for building, and from excavations from amongst the ruins, made on purpose, such a mass of original Athenian sculpture, in statues, alti and bassi relievi, capitals, cornices, frizes, and columns, as, with the aid of a few of the casts, to present all the sculpture and architecture of any value to the artist or men of taste, which can be traced at Athens.

Lord Elgin is in possession of several of the original metopes from the Temple of Minerva. These represent the battles between the Centaurs and Lapithæ, at the nuptials of Pirithous. Each metope contains two figures, grouped in various

attitudes ; sometimes the Lapithæ, sometimes the Centaurs victorious. The figure of one of the Lapithæ, who is lying dead and trampled on by a Centaur, is one of the finest productions of the art ; as well as the groupe adjoining to it, of Hippodamia, the bride, carried off by the Centaur Eurytion ; the furious style of whose galloping, in order to secure his prize, and his shrinking from the spear that has been hurled after him, are expressed with prodigious animation. They are all in such high relief, as to seem groups of statues ; and they are in general finished with as much attention behind as before. They were originally continued round the entablature of the Parthenon, and formed ninety-two groupes. The zeal of the early Christians, the barbarism of the Turks, and the explosions which took place when the temple was used as a powder magazine, have demolished a very large portion of them ; so that it is difficult to trace

even the outline of the original subject on many of the remaining fragments.

The frize, which was carried along the outer walls of the cell, offered a continuation of sculptures in low relief, and of the most exquisite beauty. This frize being unbroken by triglyphs, presented more unity of subject than the detached and insulated groupes on the metopes of the peristyle. It represented the whole of the solemn procession to the Temple of Minerva during the Panathenaic festival: many of the figures are on horseback; others are about to mount; some are in chariots; others on foot; oxen, and other victims, are led to sacrifice: the nymphs called Canephoræ, Skiophoræ, &c. are carrying the sacred offerings in baskets and vases; there are priests, magistrates, warriors, deities, &c. &c. forming altogether a series of most interesting figures, in great variety of costume, armour, and attitude. Some antiquaries, who have examined this

frize with minute attention, seem to think it contained portraits of many of the leading characters at Athens, who lived during the Peloponnesian war, particularly of Pericles, Phidias, Socrates, Alcibiades, Aspasia, &c. The whole frize, which originally was six hundred feet in length, is, like the temple itself, of Pentelico marble, from the quarries in the neighbourhood of Athens.

The tympanum over each of the porticoes of the Parthenon, was adorned with colossal statues. That over the grand entrance of the temple from the west, contained the mythological history of Minerva's birth from the brain of Jove. In the centre of the groupe was seated Jupiter. On his left, were the principal divinities of Olympus; among whom Vulcan came prominently forward, with the axe in his hand which had cleft a passage for the goddess. On the right was Victory, in loose floating robes, holding the horses of

the chariot which introduced the new divinity to Olympus. One of the bombs fired by Morosini, the Venetian, from the opposite hill of the Museum, injured many of the figures in this tympanum; and the attempt of General Kœnigsmark, in 1687, to take down the figure of Minerva, ruined the whole. On the opposite tympanum had been represented the contest of Minerva and Neptune, for the honour of being the protector of the city. By purchasing the house of one of the Turkish janizaries, built immediately under and against the columns of the portico, and by demolishing this house in order to excavate, Lord Elgin has had the satisfaction of recovering the greatest part of the statue of Victory, in a drapery which discovers the fine form of the figure, with exquisite delicacy and taste. Lord Elgin also found there the torsi of Jupiter, Neptune, and Vulcan, the breast and part of the head of Minerva, together

with other fragments. Here was also procured that most inimitable statue, in a reclining position, supposed to represent a river God.

One or two of the figures remained on this tympanum, and others were on the top of the wall, thrown back by the explosion which destroyed the temple; but the far greater part had fallen: and a house being built immediately below the space they had occupied, Lord Elgin obtained leave, after much difficulty, to pull down this house also, and continue his researches. But no fragments were here discovered; and the Turk, who had been induced, though most reluctantly, to give up his house to be demolished, then exultingly pointed out the places in the modern fortification, and in his own buildings, where the cement employed had been formed from the very statues which Lord Elgin had hoped to find. It was, in fact, afterwards ascertained, on incon-

trovertible evidence, that these statues had been reduced to powder, and so used. Then, and then only, did Lord Elgin employ means to rescue what still remained exposed to a similar fate. Among these objects is a horse's head, which far surpasses any thing of the kind in any part of Europe, both in the truth and spirit of the execution. The nostrils are distended, the ears erect; the veins swollen, one might almost say throbbing; his mouth is open, and he seems to neigh with the conscious pride of belonging to the Ruler of the Waves. Besides this inimitable head, Lord Elgin has procured, from the same pediment two colossal groupes, each consisting of two female figures. They are formed of single massive blocks of Pentelic marble: their attitudes are most graceful; and the lightness and elegance of the drapery exquisite. And, above all, the figure denominated a Hercules or Theseus, which is universally admitted to be superior to any piece

of statuary ever brought into England. Each of these statues is worked with such care, and the finishing even carried so far, that every part, and the very plinth itself on which they rest, have been equally polished on every side.

From the Opisthodomos of the Parthenon, Lord Elgin also procured some valuable inscriptions, written in the manner called Kionedon or Columnar. The greatest care is taken to preserve an equal number of letters in each line; even monosyllables are separated occasionally into two parts, if the line has had its complement, and the next line then begins with the end of the broken word. The letters range perpendicularly, as well as horizontally, so as to render it impossible to make any interpolation or erasure of the original text without discovery. In one of these inscriptions, an interpolation of comparatively modern date is clearly visible. The subjects of these monuments

are public decrees of the people; accounts of the riches contained in the treasury, and delivered by the administrators to their successors in office; enumerations of the statues, the silver, gold, and precious stones, deposited in the temples; estimates for the public works, &c.

The Parthenon itself, independently of its decorative sculpture, is so chaste and perfect a model of Doric architecture, that Lord Elgin conceived it to be of the highest importance to the arts, to secure original specimens of each member of that edifice. These consist, of a capital, assizes of the columns themselves, to shew the exact form of the curve used in channelling; a Triglyph, and motules from the cornice, and even some of the marble tiles with which the ambulatory was roofed: so that, not only the sculptor may be gratified by studying every specimen of his art, from the colossal statue to the basso-relievo, executed in the golden age

of Pericles, by Phidias himself, or under his immediate direction; but the practical architect may examine into every detail of the building, even to the mode of uniting the tambours of the columns, without the aid of mortar, which gave to the shafts, as nearly as possible, the appearance of single blocks.

Equal attention has been paid to the Temple of Theseus; but as the walls, and columns and sculpture of this monument, are in their original position, no part of the sculpture has been displaced, nor the minutest fragment of any kind separated from the building. The metopes in alto-relievo, containing a mixture of the labours of Hercules and Theseus, have been modelled and drawn, as well as the frieze representing the battle between the Centaurs and Lapithæ, some incidents of the battle of Marathon, and some mythological subjects. The temple itself is very inferior in size and ornamental sculpture

to the Parthenon; having been built by Cimon, the son of Miltiades, before Pericles had given to his countrymen that taste for such magnificence and expense, which he displayed on the edifices of the Acropolis.

The original approach to the Acropolis, from the plain of Athens, was by a long flight of steps, interrupted, as appears by later discoveries, by an open road for carriages in the centre, commencing near the foot of the Areopagus, and terminating at the Propylæa. The Propylæa was a hexastyle colonnade, with two wings, and surmounted by a pediment. Whether the metopes and tympanum were adorned with sculpture, cannot now be ascertained; as the pediment and entablature have been destroyed, and the intercolumniations built up with rubbish, in order to raise a battery of cannon on the top. Although the plan of this edifice contain some deviations from the pure taste that

reigns in the other structures of the Acropolis, yet each member is so perfect in the details of its execution, that Lord Elgin was at great pains to obtain a Doric and an Ionic capital from its ruins. On the right hand of the Propylæa, was a temple dedicated to Victory without wings; This temple was built from the sale of the spoils won in the struggles for freedom at Marathon, Salamis, and Platæa. On its frieze were sculptured many incidents of these memorable battles; in a style that has been thought by no means inferior to the sculpture of the Parthenon. The only fragments of it that had escaped the ravages of barbarians, were built into the wall of a gunpowder magazine near it, and the finest block was inserted upside downwards. It required great sacrifices of time and money, and much perseverance, to remove them. They represent the Athenians in close combat with the Persians, and the sculptor has marked the different dresses and

armour of the various forces serving under the great king. The long garments and the zones of the Persians, had induced former travellers, from the imperfect view they had of them, to suppose the subject was only the battle between Theseus and the Amazons, who invaded Attica, under the command of Antiope; but the Persian tiaras, the Phrygian bonnets, and many other particulars, prove the subject of these bas-reliefs to have been in part also the wars with the Persians\*. These bas-reliefs, and some of the most valuable sculpture, especially the representation of a marriage, taken from the parapet of the modern fortification, were embarked in the *Mentor*, a vessel belonging to Lord Elgin, which was unfortunately wrecked off the island of Cerigo: but

\* Arrian, in the thirteenth chapter of the seventh book of the *History of Alexander's Campaigns*, states, that Cimon the Athenian had delineated the battle with the Amazons with the same art and accuracy as that with the Persians.

Mr. Hamilton, who was at the time on board, having remained in the island for some months after the misfortune, succeeded at last in procuring some very expert divers from the islands of Syme and Calymno, near Rhodes; who were able with immense labour and perseverance, to extricate a few of the cases from the hold of the ship, while she lay in twelve fathoms water. The rest of the cargo was not recovered, before the storms of two winters had effectually destroyed the timbers of the vessel.

Near the Parthenon are three temples, so connected by their structure, and by the rites which were celebrated in them, that they might be almost considered as one edifice. They are of small dimensions, and of the Ionic order: one of them dedicated to Neptune and Erectheus; the second to Minerva Polias, the protectress of citadels; the third, it is supposed by some, to the nymph Pandrosos. It was

on the spot where these temples stand, that Minerva and Neptune were said to have contended for the honour of naming the city. Athenian superstition long showed the mark of Neptune's trident, and a briny fountain, which attested his having there opened a passage for his horse; and the original olive tree produced by Minerva was venerated in the temple of Pandrosos, as late as the time of the Antonines.

The temple of Minerva Polias presents the most delicate and elegant proportions of the Ionic order: the capitals and bases of the columns are ornamented with consummate taste; and the sculpture of the frieze and cornice, is exquisitely rich. It is difficult to conceive how marble has been wrought to such a depth, and brought to so sharp an edge: the palmetti, oveti, &c. have all the delicacy of works in metal. The vestibule of the temple of Neptune, is of more masculine proportions; but its Ionic capitals have great

merit. This beautiful vestibule is now used as a powder magazine; and no other access to it could be had but by creeping through an opening in a wall which had been recently built between the columns. Lord Elgin was enabled to keep it open during his operations within; but it was then closed, so that future travellers will be prevented from seeing the inner door of the temple, which is, perhaps, the most perfect specimen in existence of Ionic architecture. Both these temples have been measured; and their plans, elevations, and views, made with the utmost accuracy. All the ornaments have been moulded; some original blocks of the frieze and cornice have been obtained from the ruins, as well as a capital and a base.

The little adjoining chapel of Pandrosos is a most singular specimen of Athenian architecture: instead of Ionic columns to support the architrave, it had seven

statues of Caryan women, or Caryatides. Vitruvius says that the Athenians endeavoured, by this device, to perpetuate the infamy of the inhabitants of Caryä, who were the only Peloponnesians who sided with Xerxes in his invasion of Greece. The men had been reduced to the deplorable state of Helotes; and the women not only condemned to the most servile employments, but those of rank and family forced, in this abject condition, to wear their ancient dresses and ornaments. In this state they are here exhibited. The drapery is fine, the hair of each figure is braided in a different manner, and a kind of diadem they wear on their head forms the capital. Besides drawings and mouldings of all these particulars, Lord Elgin has brought to England one of the original statues. The Lacedæmonians had used a species of vengeance similar to that above mentioned in constructing the Persian Portico, which they had erected at

Sparta, in honour of their victory over the forces of Mardonius at Plataea: placing statues of Persians in their rich oriental dresses, instead of columns, to support the entablature.

The architects have also made a ground plan of the Acropolis, in which they have not only inserted all the existing monuments, but have likewise added those, the position of which could be ascertained from traces of their foundations. Among these are the Temple and Cave of Pan; to whose miraculous intervention the Athenians thought themselves indebted for the success of the battle of Marathon. All traces of it are now nearly obliterated; as well as of that of Aglauros, who devoted herself to death to save her country. Here the young citizens of Athens received their first armour, enrolled their names, and swore to fight to the last for the liberties of their country. Near this spot the Persians scaled the wall of

the citadel, when Themistocles had retired with the remains of the army, and the whole Athenian navy, to Salamis. The remains of the original walls may still be traced in the midst of the Turkish and Venetian additions, and they are distinguishable by three modes of construction at very remarkable epochs,—the Pelasgic, the Cecropian, and that of the age of Cimon and Pericles. It was at this last brilliant period, that the Acropolis, in its whole extent, was contemplated with the same veneration as a consecrated temple; consistent with which sublime conception, the Athenians crowned its lofty walls with an entablature of grand proportions, surmounted by a cornice. Some of the massy triglyphs and motules still remain in their original position, and produce a most imposing effect.

The ancient walls of the city of Athens, as they existed in the Peloponnesian war, have been traced by Lord Elgin's artists

in their whole extent, as well as the long walls that led to the Munychia and the Piræus. The gates, mentioned in ancient authors, have been ascertained: and every public monument, which could be recognised, has been inserted in a general map, as well as detailed plans given of each. Extensive excavations were necessary for this purpose, particularly at the Great Theatre of Bacchus; at the Pnyx, where the assemblies of the people were held, where Pericles, Alcibiades, Demosthenes, and Æschines, delivered their orations, and at the theatre built by Herodes Atticus, to the memory of his wife Regilla. The supposed Tumuli of Antiope, Euripides, and others, have also been opened; and from these excavations, and various others in the environs of Athens, has been procured a valuable collection of Greek vases. The colonies sent from Athens, Corinth, &c. into Magna Græcia, Sicily, and Etruria, carried with them

this art of making vases, from their mother country; and, as the earliest modern collections of vases were made in those colonies, they thereby acquired the name of Etruscan. Those found by Lord Elgin at Athens, Æginæ, Argos, and Corinth, will prove the claim of the Greeks to the invention and perfection of this art: Few of those in the collections of the King of Naples at Portici, or in that of Sir William Hamilton, excel some which Lord Elgin had procured, with respect to the elegance of the form, the fineness of the materials, the delicacy of the execution, or the beauty of the subjects delineated on them; and they are, for the most part, in very high preservation.\* A tumulus, into which an excavation was commenced under Lord Elgin's eye during

\* During the war with Turkey in 1806, many of the most valuable of these vases were forcibly taken away, during the absence of Signor Lusieri, under whose direction the excavations had been made.

his residence at Athens, has furnished a most valuable treasure of this kind. It consists of a large marble vase, five feet in circumference, enclosing one of bronze thirteen inches in diameter, of beautiful form, in which was a deposit of burnt bones, and a lachrymatory of alabaster, of exquisite shape; and on the bones lay a wreath of myrtle in gold, having, besides leaves, both buds and flowers. This tumulus is situated on the road which leads from Port Piræus to the Salaminian Ferry and Eleusis. May it not be the tomb of Aspasia?

From the Theatre of Bacchus, Lord Elgin has obtained the very ancient sundial, which existed there during the time of Æschylus, Sophocles, and Euripides; and a large statue of the Indian, or bearded Bacchus,\* dedicated by Thra-

\* This statue is represented by Stuart with a female's head, and was called by him the personification of the Demos of Athens.

syllus in gratitude for his having obtained the prize of tragedy at the Panathenaic festival. A beautiful little Corinthian temple near it, raised for a similar prize gained by Lysicrates, and commonly called the Lantern of Demosthenes, has also been drawn and modelled. It is one of the most exquisite productions of Greek architecture. The elevation, ground-plan, and other details of the octagonal temple, raised by Andronicus Cyrrhestes to the winds, have also been executed with care; but the sculpture on its frieze is in so heavy a style, that it was not judged worthy of being modelled in plaster.

Permission was obtained from the archbishop of Athens, to examine the interior of all the churches and convents in Athens and its neighbourhood, in search of antiquities; and his authority was frequently employed, to permit Lord Elgin to carry away several curious fragments of antiquity. This search furnished many va-

luable bas-reliefs, inscriptions, ancient dials, a Gymnasiarch's chair in marble, on the back of which are figures of Harmodius and Aristogiton, with daggers in their hands, and the death of Leæna, who bit out her tongue during the torture, rather than confess what she knew of the conspiracy against the Pisistratidæ. The fountain in the court-yard of the English consul Logotheti's house was decorated with a bas-relief of Bacchantes, in the style called Græco-Etruscan: Lord Elgin obtained this, as well as a *quadriga* in bas-relief, with a Victory hovering over the charioteer, probably an *ex voto*, for some victory at the Olympic games. Amongst the Funeral Cippi found in different places, are some illustrious names, particularly that of Socrates; and in the Ceramicus itself, Lord Elgin discovered an inscription in elegiac verse, on the Athenians who fell at Potidæa, and whose eulogy was delivered with pathe-

tic eloquence in the funeral oration of Pericles.

The peasants at Athens generally put into a niche over the door of their cottages, any fragment they discover, in ploughing the fields. Out of these, were selected and purchased many curious antique votive tablets, with sculpture and inscriptions. A complete series has also been formed of capitals, of the three orders known in Greece, the Doric, the Ionic, and the Corinthian.

At a convent called Daphne, about half way between Athens and Eleusis, were the remains of an Ionic temple of Venus, equally remarkable for the brilliancy of the marble, the bold style of the ornaments, the delicacy with which they are finished, and their high preservation. Lord Elgin procured from thence two of the capitals, a whole fluted column, and a base.

Lord Elgin was indebted chiefly to the

friendship of the Captain Pasha, for the good fortune of procuring, while at the Dardanelles, in his way to Constantinople, the celebrated Boustrophedon inscription, from the promontory of Sigæum, a monument which several ambassadors from Christian Powers to the Porte, and even Louis XIV. in the height of his power, had ineffectually endeavoured to obtain. Lord Elgin found it forming a seat or couch at the door of a Greek chapel, and habitually resorted to by persons afflicted with ague; who, deriving great relief from reclining upon it, attributed their recovery to the marble, and not to the elevated situation and sea air, of which it procured them the advantage. This ill-fated superstition had already obliterated more than one half of the inscription, and in a few years more it would have become perfectly illegible.

By the aid of this valuable acquisition,

Lord Elgin's collection of inscriptions comprehends specimens of almost every remarkable peculiarity in the variations of the Greek alphabet, throughout the most interesting periods of Grecian history.

A few bronzes, cameos, and intaglios, were also procured: in particular, a cameo of very exquisite beauty, in perfect preservation, and of a peculiarly fine stone: it represents a female centaur suckling a young one. Lord Elgin was equally fortunate in forming a collection of Greek medals, among which are several that are very rare; others of much historical merit; and many most admirable specimens of art.

The late Dr. Carlyle, Professor of Arabic at Cambridge, had accompanied Lord Elgin to Turkey, in the hopes of discovering any hidden treasures of Grecian or Arabic literature. Accordingly, Lord Elgin obtained for him access to some deposits of MSS. in the Seraglio: and, in

company with another gentleman of the embassy, amply qualified also for the research, he examined many collections in Constantinople, and in the neighbouring islands; more than thirty monasteries on Mount Athos; and various other religious establishments throughout Greece, and the islands of the Archipelago. From these, they brought home a great many MSS. which to them appeared valuable; as well as a particular catalogue and description of such as they were obliged to leave behind them.

In proportion as Lord Elgin's plan advanced, and the means accumulated in his hands towards affording an accurate knowledge of the works of architecture and sculpture in Athens and in Greece, it became a subject of anxious inquiry with him, in what way the greatest degree of benefit could be derived to the arts from what he had been so fortunate as to procure.

In regard to the works of the architects employed by him, he had naturally, from the beginning, looked forward to their being engraved: and accordingly all such plans, elevations, and details, as to those persons appeared desirable for that object, were by them, and on the spot, extended with the greatest possible care, and they are now in a state of complete preparation. Besides these, all the working sketches and measurements have been preserved, and offer ample materials for further drawings, should they be required. It was then Lord Elgin's wish, both out of respect for the subjects themselves, and in a view to their future utility, that the whole of the drawings might be executed in the highest perfection of the art of engraving: and for this purpose, he conceived it not impossible, and certainly very much to be desired, that a fund should be procured by subscription, exhibition, or otherwise; by aid of which,

these engravings might still be distributable, for the benefit of artists, at a rate of expense within the means of professional men.

More difficulty occurred in forming a plan, for deriving the utmost advantage from the marbles and casts. Lord Elgin's first attempt was to have the statues and bas-reliefs restored; and in that view he went to Rome, to consult and to employ Canova. The decision of that most eminent artist was conclusive. On examining the specimens produced to him, and making himself acquainted with the whole collection, and particularly with what came from the Parthenon, by means of the persons who had been carrying on Lord Elgin's operations at Athens, and who had returned with him to Rome, Canova declared, "That however greatly it was to be lamented that these statues should have suffered so much from time

and barbarism, yet it was undeniable, that they had never been retouched; that they were the work of the ablest artists the world had ever seen; executed under the most enlightened patron of the arts, and at a period when genius enjoyed the most liberal encouragement, and had attained the highest degree of perfection; and that they had been found worthy of forming the decoration of the most admired edifice ever erected in Greece: That he should have had the greatest delight, and derived the greatest benefit, from the opportunity Lord Elgin offered him of having in his possession, and contemplating, these inestimable marbles:” But, (*his expression was,*) “it would be “sacrilege in him, or any man, to presume “to touch them with a chisel.” Since their arrival in this country, they have been laid open to the inspection of the public; and the opinions and impres-

sions, not only of artists, but of men of taste in general, have thus been formed and collected. From these, the judgment pronounced by Canova has been universally sanctioned: and all idea of restoring the marbles has been deprecated. Meanwhile the most distinguished painters and sculptors have assiduously attended this museum, and evinced the most enthusiastic admiration of the perfection, to which these marbles now prove to them that Phidias had brought the art of sculpture, and which had hitherto only been known through the medium of ancient authors. They have attentively examined them; and they have ascertained, that they were executed with the most scrupulous anatomical truth, not only in the human figure, but in the various animals to be found in this collection. They have been struck with the wonderful accuracy, and, at the same time, the great effect of

the minutest detail; and with the life, and expression, so distinctly produced in every variety of attitude and action. Those more advanced in years, have testified the liveliest concern, at not having had the advantage of studying these models: And many, who have had the opportunity of forming the comparison, (among these are the most eminent sculptors and painters in this metropolis,) have publicly and unequivocally declared, that in the view of professional men, this collection is far more valuable than any other collection in existence. The President of the Royal Academy, no less eminent as an artist, than as the zealous patron and encourager of the arts in this country, after passing some months in the daily study of these marbles, and having ascertained the advantage to be derived from them, to painting as well as to sculpture, communicated to Lord

Elgin the annexed report of his operations.\*

Two suggestions have, however, met with much approbation, in a view to the improvement to be obtained to sculpture, from these marbles and casts—The first, that casts of all such as were ornaments on the temples, should be placed in an elevation, and in a situation, similar to that which they actually had occupied; that the originals should be disposed, in a view to the more easy inspection and study of them; and that particular subjects should occasionally be selected, and premiums given for the restoration of them. This restoration to be executed on casts, but by no means on the originals; and in the museum itself, where the character of the sculpture might be more readily studied.

Secondly: From trials which Lord Elgin was induced to make, at the request

\* Vide Mr. West's Letter subjoined. Appendix [A].

of professional gentlemen, a strong impression was created, that the science of sculpture, and the taste and judgment by which it is to be carried forward and appreciated, could not so effectually be promoted, as by athletic exercises practised in the presence of similar works; the distinguishing merit of which, is an able, scientific, ingenious, but exact imitation of Nature. By no other way could the variety of attitude, the articulation of the muscles, the description of the passions; in short, every thing a sculptor has to represent, be so accurately or so beneficially understood and represented.

Under similar advantages, and with an enlightened and encouraging protection bestowed on genius and the arts, it may not be too sanguine to indulge a hope, that, prodigal as Nature is in the perfections of the human figure in this country, animating as are the instances of patriotism, heroic actions, and

private virtues, deserving commemoration, sculpture may soon be raised in England to rival the ablest productions of the best times of Greece.

*H. Jones sculp.*

APPENDIX. [A.]

---

BENJAMIN WEST, Esq.

TO

THE EARL OF ELGIN.

---

London, Newman Street, Feb. 6, 1809.

MY LORD,

I HAVE to acknowledge the receipt of your Lordship's obliging letter from your residence in Scotland; and have to thank you for the indulgence you afforded me, to study, and draw from, the sculptures by Phidias,\* in your Lordship's house in Piccadilly.

I have found in this collection of sculpture so much excellence in art, (which is as applicable to painting and architecture, as to sculpture,) and a variety so magnificent and boundless, that every branch of science connected with the fine arts, cannot fail to acquire something from this collection. Your Lordship, by bringing these treasures of the

\* Vide Appendix [B.]

first and best age of sculpture and architecture into London, has founded a new Athens for the emulation and example of the British student. Esteeming this collection as I do, my Lord, I flatter myself it will not be unacceptable for your Lordship to know, what are the studies I have made from it.

I must premise to your Lordship, that I considered loose and detached sketches from these reliques, of little use to me, or value to the arts in general. To improve myself, therefore, and to contribute to the improvement of others, I have deemed it more important to select and combine whatever was most excellent from them, into subject and composition.

From the Centaurs in *alto relievo*, I have taken the figures of most distinguished eminence, and formed them into groupes for painting; from which selection, by adding female figures of my own, I have composed the Battle of the Centaurs. I have drawn the figures the size of the originals, on a canvass five feet six inches high, by ten feet long.

From the equestrian figures in *relievo*, I have formed the composition of Theseus and Hercules in triumph over the Amazons, having made their Queen Hippolita a prisoner. In continuation, and as a companion to this subject, I have formed a composition, in which Hercules bestows Hippolita in marriage upon Theseus. Those two are on the same size with the Centaurs.

From the large figure of Theseus, I have drawn a figure of that hero, of the same size with the sculpture. Before him, on the ground, I have laid the dead body of the Minotaur which he slew. As, by this enterprise, he was extricated from the Labyrinth by the aid of Ariadne, I have represented that Princess sitting by his side, gazing on him with affection. In the back-ground, are the Athenian youths, whom he delivered from bondage; and near them, the ship "with black sails," (in the poetry of Pindar,) which brought him to Crete. The size of this canvass is six feet high, by nine feet long.

From the figure of Neptune, I have formed a companion to the Theseus. In this composition, I have shown Neptune reclining, with his left arm upon the knees of Amphitrite, while with his right he strikes the earth with his trident, and creates the horse. Around him, is Triton, with his train of marine gods; in the back ground, are equestrian exhibitions; and in the distance, ships at anchor.

From the casts in plaster of Paris, taken from the moulds which your Lordship had made at Athens, I selected such figures as I was enabled to form into a composition; the subject of which is, Alexander, and his horse Bucephalus: it is on a canvass smaller than those before mentioned.

In order to render the subjects which I selected, with perspicuity, and the effect, which arises from

combined parts and the order of arrangements, comprehensive, I have ventured to unite figures of my own invention with those of Phidias; but as I have endeavoured to preserve, with the best force of my abilities, the style of Phidias, I flatter myself, the union will not be deemed incongruous or presumptuous. Your Lordship may perhaps be inclined to think with me, that a point, and, if I may so express it, a kind of climax, is thus given to those works, by the union of those detached figures, with the incorporation of the parts of individual grandeur, and abstracted excellence of Phidias. For what I have done, my Lord, I had the example of Raphael, and most of the Italian masters of the greatest celebrity. Is it not, moreover, this combination of parts which comes the nearest to perfection in refined and ideal art? For, thus combining what is excellent in art with what possesses character in nature, the most distinguished works have been produced, in painting, poetry, and sculpture.

In following this system of combination, I had the singular good fortune, by your Lordship's liberality, to select from the first productions of sculpture which ever adorned the world in that department in art; which neither Raphael, nor any of the distinguished masters, had the advantage to see, much less to study, since the revival of art. I may therefore, declare with truth, my Lord, that I am the first in modern times who have enjoyed the much

coveted opportunity, and availed myself of the rare advantage of forming compositions from them, by adapting their excellencies to poetic fictions and historical facts. I sincerely hope that those examples of art, with which your Lordship has enriched your country, and which has made London, if not the first, one of the most desirable points in Europe to study them—will not only afford to the British people the frequent opportunity of contemplating their excellencies; but will be the means of enlightening the public mind, and correcting the national taste, to a true estimation of what is really valuable and dignified in art. The influence of these works will, I trust, encourage the men of taste and opulence in this country, to bestow a liberal patronage on genius to pursue this dignified style in art; for the honour of genius, themselves, and the country. I need not impress on your Lordship's mind a truth, of which the experience of the progress of art, through all ages, is the best confirmation, that without such refinement in this higher department of poetic or historical subjects, England will never acquire the glory of possessing the arts in any but a subordinate degree. It is my wish, therefore, as it has been my endeavour, that the supreme excellence of those works of sculpture should become the means, and act as an incentive to that improvement amongst us, by which we may

gratify the ambition of all honourable minds, and be remembered amongst the Lovers of art and our country in a distant posterity, as those who have opened the avenues of excellence, and have rightly known and valued them. Let us, my Lord, justify ourselves, at least, by our intentions. In whatever estimation the arts of the present day shall be held by those of future ages, your Lordship must be remembered by the present, and be recorded by those to come, as a benefactor, who has conferred obligations, not only on a profession, but upon a nation; and as having rescued from the devastation of ignorance, and the unholy rapine of barbarism, those unrivalled works of genius, to be preserved in the bosom of your country, which a few centuries more might have consigned to oblivion.

To your Lordship I have to return my sincere thanks, for the means you have afforded me of adding my name to that of Phidias, by arranging his figures in my own compositions, and adapting them to subjects, by which my sketches may be rendered more acceptable, as well as more improving to myself in the higher point of my profession. And may the materials from which those sublime sculptures have been produced, be preserved from accident, that men of taste and genius, yet unborn, may be gratified with a sight of them; and that the admiring world may revere the Author of all things,

for having bestowed on man those peculiar powers of his mind and hand; With these sentiments, and with profound respect for your Lordship, I have the honour to be.

MY LORD,

Your Lordship's most

Obedient and obliged,

BENJ. WEST.

*To the Earl of Elgin.*

---

Newman Street, March 20, 1811.

MY LORD,

LEARNING that your Lordship is in town, I avail myself of the opportunity to request you would do me the honour of a visit, to see the last Historical Picture I have painted.—The subject is our Saviour receiving the blind and sick, in the Temple, to heal them.—This picture I am the more desirous of showing to your Lordship, as I have conducted it on those dignified principles of refined art, which I found so superior in the Athenian sculpture, with which you have enriched your country.

In the former letter, which I had the honour of writing to your Lordship, I mentioned, that I perceived in your marbles, points of excellence as appropriate to painting as to sculpture. The points to which I alluded, are the visible signs of that

internal life, with which the animal creation is endowed for the attainment of the various purposes for which they were created. It was the representation of these emotions of life which the philosophers among the Greeks recommended to their sculptors, at a period when their figures were but little removed from Egyptian statues. And, accordingly, the influence of this advice was perceptible in the subsequent works of their artists. Who, in fact, can look on the Horse's Head in your Lordship's Collection of Athenian Sculpture, without observing the animation and expression of real life? Would one not almost suppose, that some magic power, rather than a human hand, had turned the head into stone, at the moment when the horse was in all the energies of its nature?—We feel the same, when we view the young equestrian Athenians; and in observing them, we are insensibly carried on with the impression, that they and their horses actually existed, as we see them, at the instant when they were converted into marble.

In the last production of my pencil, which I now invite your Lordship to see, it has been my ambition, (though at a very advanced period of life,) to introduce those refinements in art, which are so distinguished in your Collection. And if I have achieved this, the obligation is to your Lordship, for bringing those marbles to England, and giving me the opportunity of studying them. Had I been

blessed with seeing and studying these emanations of genius at an earlier period of life, the sentiment of their pre-eminence would have animated all my exertions; and more character, and expression, and life, would have pervaded all my humble attempts in Historical Painting. Let us suppose a young man at this time in London endowed with powers such as enabled Michael Angelo to advance the arts, as he did, by the aid of one mutilated specimen of Grecian excellence in sculpture; to what an eminence might not such a genius carry art, by the opportunity of studying those sculptures in the aggregate, which adorned the Temple of Minerva at Athens? It is therefore my devout wish, that they should rest in the Capital of this Empire; and that their resting-place should be as accessible as possible to public inspection, in order to impart, generally, a true notion of what is classical in art. Such a deposit would not only be of infinite advantage to young artists, by rendering them familiar with such excellence; but it would be the means of diffusing a correct knowledge of art, whereby real merit in it might be appreciated, and judiciously rewarded.

In painting, sculpture, and architecture, it is the same as in letters. Without the opportunity of knowing what is classical in art, neither of these branches can be refined by their professors, nor adequately encouraged by their patrons.

You may be assured, my Lord, that unless England establishes the means of cultivating the exalted class of art within herself, she will never be entitled to participate with Greece and Rome in the honour they acquired in the fine arts. Yet I know no people, since the Greeks, so capable, as the inhabitants of this island, of emulating them in art, if rightly directed and patronised—For the British are a scientific and reasoning people in all matters which they undertake to investigate: and I hope the time is not far distant, when a right direction in the fine arts will not only be attained, but consolidated on true and permanent principles.

With profound respect, I have the honour to be,

MY LORD,

Your Lordship's

Most obedient servant,

BENJ. WEST.

*To the Right Hon. the Earl of Elgin.*

## APPENDIX. [B.]

### NOTES

ON

### PHIDIAS AND HIS SCHOOL;

COLLECTED FROM ANCIENT AUTHORS.

PHIDIAS, the son of Charmidas, was born about 500 years before Christ. He was originally a painter,\* and he carried the arts of painting and sculpture to a greater perfection than they had ever before attained. His brother, Panæus, also painted the celebrated Marathon in the Pæcile.† In the art of making statues of bronze, both for the number and excellence of his works, Phidias was without a rival. His Amazon,‡ but especially his Lemnian Minerva,§ were for many ages the admiration of the

\* Plin. Nat. Hist. lib. xxxv. c. 84.

world for their faultless symmetry. In works of ivory also, Phidias stands alone.\* The enthusiasm with which Cicero,† Strabo,‡ Pliny,|| and Pausanias,§ speak of his colossal statues of Jupiter and Minerva, which he executed in ivory and gold, can best be learned by consulting those writers: but there is reason to believe that Phidias himself did not approve of the application of this material to works of art; at least not to works of that size, however it may have suited the capricious taste of the Athenian people.¶ In an assembly of the people he is said to have earnestly recommended a different substance for the statue of Minerva, which was to be placed in her temple in the Acropolis: but on the Athenians being informed that it would be cheaper than ivory, they rejected the proposal.

Besides these two colossal statues in ivory and gold, we do not hear of above one or two more executed in these materials by the same artist. The far greater number of his statues, which are expressly mentioned by the ancient writers, are in bronze.

Phidias, however, did not disdain efforts of an humbler sort: for, not to dwell on his statues in

wood,\* plaster, and clay,† nor on certain pieces of minute mechanism, as fish and flies,‡ ascribed to the same master; he was the first who discovered the true principles of carving in relieve;|| and, in the smallest productions of his art, he preserved, according to Pliny, the same grandeur of execution, which characterized his greatest works. The same author mentions in terms of high praise, the Lapithæ and Centaurs, carved on the sandals of Minerva, and the workmanship of her shield; on the convex side of which, was represented the battle of the Amazons, and on the concave, that of the Gods and Giants. The shield, moreover, contained a likeness of Pericles, fighting with an Amazon,§ and was put together so artfully, that if a figure of Phidias himself (representing him as an old bald man, holding up a large stone in his hands, to denote his being the architect of the temple) were by any means removed, the whole shield must inevitably have fallen to pieces.¶

The masters of the greatest eminence which the School of Phidias produced, were Agoracritus, Alcamenes, and Colotes. Of these, Alcamenes was the most distinguished; he is mentioned by the ancients as an artist of the greatest merit. We praise, says

Cicero, that Vulcan at Athens, which Alcamenes made; in which, though standing and covered over with drapery, there is an appearance of lameness without deformity.\* Valerius Maximus gives a similar description of it at greater length.† Pausanias makes mention of a beautiful Bacchus‡ from the hands of this master, in ivory and gold; and two colossal statues of Minerva and Hercules, erected at Thebes, of Pentelic marble.¶

But the master-piece of Alcamenes was the groupe of statues on the pediment of the back front of the Temple of Jupiter§ at Olympia; the description of which, in the *Eliac* of Pausanias, affords so many singular coincidences with the statues upon the pediments of the Parthenon at Athens, that it is scarcely possible to entertain a doubt that both were erected nearly at the same period. It is not improbable that Alcamenes had attempted to imitate the latter, encouraged by the success of his master Phidias in a similar undertaking.

Of the same Alcamenes, we read in Pliny that he was a statuary of the highest merit, that many of his works still adorned the temples, and that he had produced the incomparable Venus without the walls, called the *Ἀφροδίτη ἐν κρήνῃς*.¶

\* De Nat. Deor. lib. i. c. 30.

¶ Id. in Bœot. p. 139. ed. Kuhn. ¶ Plin. lib. xxxvi. c. 4.

Another of Phidias' scholars—his favourite pupil Agoracritus, is chiefly celebrated as connected with the famous statue of Nemesis, the Goddess of Vengeance, at Rhamnus, near Marathon, in memory of the result of that battle. The history of this statue, and its allegorical accessories, one of the departments of the art peculiar to Phidias, are too well known to be repeated here. To this statue was appended a label, stating that it was the work of Agoracritus: but all the ancient writers who mention it, and particularly Pausanias, speak of it as the work of Phidias—and it appears to have been one of the most extraordinary productions in marble sculpture which the art has ever produced.\*

Of the other marble statues attributed to Phidias, were:

1. The Mercury Pronaos in the Temple of Ismenian Apollo at Thebes.†

2. A beautiful Venus in the Octavian Museum at Rome.‡

3. The face, hands, and feet, of the Minerva Bellica of the Plataeans, from the spoils at Marathon.¶ The rest of the statue was of wood and gold.

4. The Venus Urania, in Parian marble, in the temple of that Goddess in Attica

5. One of the colossal statues on the Esquiline

\* Paus. Pliny, &c. † Paus. in Bœot. p. 257. ed. Xyland.

Hill.—The inscription is of later date; and therefore, exclusive of the merit of the sculpture, carries with it no other testimony than that of the notoriety of Phidias as a sculptor in marble.\*

In the Augustan age, and in that immediately subsequent to it, it was generally believed, not only that Phidias frequently caused the names of his pupils to be inscribed on his own statues, but that he had given instances of the greatest skill in finishing the works of other artists. Amongst these last was the above-mentioned statue of Aphrodite *ἐν κηποις* by Alcamenes. To this extraordinary talent, which we must suppose was chiefly exercised in works of marble, Cicero alludes in the 4th book de Fin. For. et Mal. “Ut Phidias potest a principio instituere signum, idque perficere: potest ab alio inchoatum accipere, et absolvere.”

With respect to the particular character of the sculpture of Phidias, we may gather from the language of the ancients respecting him, that he had no competitor at least for posthumous fame. That his excellence in his own art became a proverbial term of comparison, by which to illustrate that of all other persons whatsoever in their particular departments.

\* The same inference may be drawn from the following passage in Aristotle. Eudem. lib. v. c. 7.—Τὴν δὲ σφραγὶν ἐν ταῖς τέχναις τοῖς ἀκριβεστάτοις τὰς τέχνας ἀποδίδομεν ὡς Φειδίου λιθουργὸν σόφον, καὶ Πολύκλειτον ἀνδριαντοποιόν.

As an elegant modern French writer has observed,\* “The sculptors who preceded Phidias could not divest their statues of a certain stiff and dry formality. Phidias was the first who gave to his style, according to the expressions of the ancients, grandeur, majesty, gravity, breadth, and magnificence.”

Dionysius Halicarnassensis, in his essay on the oratory of Isocrates, compares it, in the following terms, with the sculpture of Phidias:

Θαυμάσιον γὰρ ἐστὶ καὶ μέγα τοῦ τῆς Ἰσοκράτους κατασκευῆς ὕψος, ἡρώϊκός τε μᾶλλον ἢ ἀνδραγαθὴς φήσας δικαίον. δεκεὶ δὲ μοι μὴ ἀποσκοπεῖ τις ἂν ἐκλάσῃ τὴν Ἰσοκράτους ῥητορικὴν τῇ Πολύκλειτος καὶ Φειδίου τέχνῃ, κατὰ τὸ σεμνὸν καὶ μεγαλότεχρον, καὶ αξιωματικόν. And in his chapter on Dinarchus, where he is dilating on the advantages possessed by original writers or artists, and the impossibility of those who come after them, imitating their life, and spirit, and real beauties, he adds, speaking of Phidias, and other great masters), ὅτι πᾶσι μὲν τοῖς ἀρχαίοις, ἀνολοφύς τις ἐπιπέσει χάρις, καὶ ἄρα.

Quintilian, with more critical acumen, distinguishes, by strong lines, the different merits of Phidias and Polyclethus. Lib. xii. c. 10. “Diligentia ac decor in Polycleto supra ceteros, cui quanquam a plerisque tribuitur palma, tamen, ne nihil detrahatur, deesse potest putant. Nam ut humanæ formæ decorem addiderit

\* Essai sur l'Art Statuaire.

"supra verum, ita non explevisse Deorum auctoritatem  
 "videtur. Quin ætatem quoque graviorem dicitur refu-  
 "gisse, nihil ausus ultra leves genas. At quæ Poly-  
 "ceto\* defuerunt; Phidiæ atque Alcameni dantur.  
 "Phidias tamen diis quam hominibus efficiendis melior  
 "artifex traditur, in Ebore vero longè citrà æmulum,  
 "vel si nihil, nisi Minervam Athenis, aut Olympium  
 "in Elide Jovem fecisset: cujus pulchritudo adjecisse  
 "aliquid receptæ religioni videtur, aded majestas operis  
 "Deum æquavit."

But words were inadequate to express with sufficient  
 energy the admiration which the ancients felt for the  
 style and character of the works of this celebrated  
 artist. They compared them to the style of Thucy-  
 dides and of Demosthenes. Yet the masculine beauty  
 portrayed by the hand of Phidias was combined with  
 sweetness, with elegance, and with grace. Equally

\* Quintilian must be here supposed to compare the different  
 excellencies of Polycletus, Alcamenes, and Phidias, with res-  
 pect to their works in marble, as Alcamenes only worked in  
 that material. The same may be said of Ep. xiii. and vi. of  
 Martial:

"Quis te Phidiaco formatam, Julia, cœlo  
 Vel quis Palladiæ non putet artis opus?  
 Candida non tacitâ respondet imagine Lygdos†  
 Et placido fulget vivus in ore decor."

† Lygdos was a part of Mount Taurus, famous for its white marble.

ingenious as he was sublime, he executed great works  
 with energy; those the more inferior, with simplicity  
 and truth.

"Artis Phidiacæ tereuma clarum

"Pisces adspicis: adde aquam, natabunt."

MARTIAL, III. 35.

His style, which varied with his subject, was at  
 the same time grand and refined.\* If Phidias had  
 not applied all his powers to portray the slightest  
 shades, and the most delicate lines, he never would have  
 reached that expression of life peculiarly his own.  
 His style was truly admirable, because it "united the  
 three characters of truth, grandeur, and minute re-  
 finement."

Plutarch, in his life of Pericles, tells us, that that  
 munificent and enlightened patron of the arts appointed  
 Phidias the sole director of all his public works. All  
 the other artists, however eminent, received his orders.  
 Of these, Callicrates and Ictinus were particularly em-  
 ployed upon the Parthenon.

The two distinguished men above-mentioned, who  
 seemed to live for each other's glory, and to combine  
 their joint exertions in order to embellish Athens, were  
 frequently the objects of jealousy to the Athenian  
 people; and Phidias fell a victim to their animosity

\* Εχυσά τι καὶ μεγαλείου καὶ ἀριότητος ἄμα.—Demet.  
 Phal. de Elocut. cap. 14.

for attempting to give to his own name the immortality which it was not doubted would be the inheritance of his works.

Plutarch, in speaking of these works, describes them in the following terms ;

After observing in general that those which were slowly executed were likely to be the most durable, he adds—“ Hence we have the more reason to wonder, “ that the structures raised by Pericles should be built “ so quickly, and yet built for ages; for as each of them, “ when finished, had the venerable air of antiquity, so, “ even now they retain the strength and freshness of a “ modern building. A bloom is diffused over them, “ which preserves their aspect untarnished by time, as if “ they were animated with a spirit of perpetual youth, “ and unfading elegance.”

Pausanias, a cotemporary of Plutarch, says very little on the subject of the Temple of Minerva at Athens. He merely remarks, that on the western façade was represented the Birth of Minerva; and on that to the east, the Contest between Minerva and Neptune for naming the city. After describing the statue of the Goddess, which was of ivory and gold, he adds\*—

\* “ Τρίη δὲ ἢ γενέσθαι πανδαγαν, οὐκ ἦν πῶ γυναικῶν γένος—  
ἑταρῶν εὐκρίνα ἰδῶν ἰδὲ Ἀδριανου βασιλιδας μόνου.”

To this passage it may probably be attributed, that some modern travellers, who had no means of viewing the statues but from the ground, and, of course, from a considerable dis-

“ The only statue of a man which I saw here [Ἰστιαῖνα]  
“ was one of Hadrian.”

A few words may be necessary upon the subject of the sculptures on the exterior of the Parthenon.

The practice had obtained among the sculptors and architects of Greece in a very early period of the art, of introducing groupes of statues to occupy the *ἀεὶδον*, or triangular space above the porticos of the temples.

The description in Diodorus Siculus of the sculptures on the pediment of the Temple of Jupiter at Agrigentum, representing at one extremity the Battle of the Giants, and at the other the taking of Troy—the Twelve Labours of Hercules, on the fronton of the Temple of Hercules at Thebes, by the hand of Praxiteles—the Calydonian Boar Hunt, described with so much detail in the 8th book of Pausanias, on the Temple of Minerva Alea at Tegæa—those in honour of Bacchus and Apollo, on the two frontons of the Temple of Apollo, at Delphi, by the hands of Praxias, the pupil of Calarnis, and of Androsthenes, the pupil of Eucadmus, both of them Athenian artists;—but above all, the magnificent Temple of Jupiter, at Olympia.—All these instances present a strong body of evidence,

have imagined that two of them, on the western pediment, were whiter and fresher than the rest, and bore a resemblance to Hadrian and Sabina.

\* Vide Pausan. in Att.

that a building of the character of the Temple of Minerva, at Athens, would not have been left by Pericles with a bare pediment; and if Phidias did place any sculptures upon them, it can hardly be doubted that they were amongst the most distinguished works of that artist and of his pupils.

No subjects of ancient fable are more frequently alluded to in the poets and historians of Greece and Rome, than the contest between Minerva and Neptune; the birth of the former; and the battle of the Centaurs and Lapithæ. One instance of this nature, bearing an immediate allusion to the present subject, may be adduced from the 6th book of Ovid's *Metamorphoses*. The poet is relating the contest between Minerva and Arachne for the honours of the loom. The Goddess is appropriately described as tracing upon her tapestry her former contest with Neptune for the honour of naming the capital of Greece. The poet's words are so strikingly descriptive of the sculptures on one of the pediments of the Parthenon, that the reader will readily pardon their being quoted at length.

"Cecropiâ Pallas Scopulum Mavortis in arce  
Pingit, et antiquam terræ de nomine litern.  
His sex cœlestes, medio Jove, sedibus altis  
Augustâ gravitate sedent, sua quemque Deorum  
Inscribit facies: Jovis est regalis imago.  
Stare Deum pelagi, longoque ferire tridente

Aspera saxa facit, medioque e vulnere saxi  
Exsiluisse ferum; quo pignore vindicet urbem.  
At sibi dat clypeum, dat acuta cuspide hastam,  
Dat galeam capiti; defenditur ægide pectus;  
Percussamque sua simulat de cusplde terram  
Prodere cum baccis foetum caentis olivæ;  
Miratique Deos; operi victoria finis."\*

A more elegant compliment to the genius and arts of Athens can scarcely be imagined, than is contained in these lines.

The subject of the tapestry is the same with that of the statues upon the temple.

The Goddess herself is represented producing, as the utmost effort of an imitative art, the same picture which already adorned her own temple in her own city.

The twelve deities seated, with Jupiter in the midst, exactly correspond with the remains which have been preserved. Neptune produces the horse, and Minerva the olive tree:† and the Arx Cecropia seems to fix,

\* Ovid Met. lib. vi. Fab. 1.

† Traces of the accessory ornaments, alluded to by the poet, are to be found in several of the mutilated statues on the pediments: but, as these were of bronze, or other more precious material, they have long since disappeared, as well as those of which some remains are still to be discovered on the metopes, and on the frieze of the cell.

beyond a doubt, the spot to which the poet attaches the scenes which he describes.

An objection might possibly be started, that "Scopulum Mavortis" would allude to the Areopagus; but it does not readily appear that the Areopagus was ever so called: whereas, on a reference to Pausanias, one is struck with the peculiar propriety of applying, in the present instance, this denomination to the ground on which the Temple of Minerva stands.

Pausanias begins the fifth chapter of his Attics with a description of the Tholus or Prytaneura, which was to the east and north of the Acropolis. He then mentions the statues of several heroes who gave their names to the Athenian tribes. He enters into details of the history of Athens under Pandion, and during the reigns of Ptolemy, Antigonus, and Attalus. Returning to the statues, he enumerates, among others, that of Demosthenes, and close to it a *Temple dedicated to Mars*. He then describes several other statues; and at length arrives at the Theatre of Bacchus and the Odeon. This statement would seem to fix the Temple of Mars in some spot under the craggy cliffs which terminate the Acropolis to the east, (i. e. in the line of the street of the Tripods;) and gives a rational ground for supposing, that these cliffs were the Scopulum Mavortis of the poet.— Now the eastern façade of the Parthenon appears

to rise immediately above these craggy cliffs, and certainly presents to the spectator below one of the grandest scenes which can be imagined, even in Greece

beyond a doubt, the spot to which the poet attaches the scenes which he describes.

An objection might possibly be started, that "Scopulum Mavortis" would allude to the Areopagus; but it does not readily appear that the Areopagus was ever so called: whereas, on a reference to Pausanias, one is struck with the peculiar propriety of applying, in the present instance, this denomination to the ground on which the Temple of Minerva stands.

Pausanias begins the fifth chapter of his Attics with a description of the Tholus or Prytaneum, which was to the east and north of the Acropolis. He then mentions the statues of several heroes who gave their names to the Athenian tribes. He enters into details of the history of Athens under Pandion, and during the reigns of Ptolemy, Antigonus, and Attalus. Returning to the statues, he enumerates, among others, that of Demosthenes, and close to it a *Temple dedicated to Mars*. He then describes several other statues; and at length arrives at the Theatre of Bacchus and the Odeon. This statement would seem to fix the Temple of Mars in some spot under the craggy cliffs which terminate the Acropolis to the east, (i. e. in the line of the street of the Tripods;) and gives a rational ground for supposing, that those cliffs were the Scopulum Mavortis of the poet.— Now the eastern façade of the Parthenon appears

to rise immediately above these craggy cliffs, and certainly presents to the spectator below one of the grandest scenes which can be imagined, even in Greece

In the 1815 Memorandum on the Subject of THE EARL OF ELGIN'S PURSUITS in Greece, Second Edition, Corrected, London; Printed for John Murray, Albermarle Street, By W. Bulmer and Co, Cleveland Row, 1815, pages 72 to 83 are French language translations of appendices C and D and have been omitted.

tion dont j'ai été frappé à la vue de ces antiques ouvrages, m'entraîneroient, Monsieur, au-delà des limites d'une lettre. Je m'arrête ici dans la crainte de les dépasser, et je vous prie d'agréer, à cette occasion, les hommages de ma haute et sincère estime.

Membre de l'Institut Royal de France.

## APPENDIX. [E.]

---

*The following Letter was written to a friend of Lord Elgin's, some months ago, by a person who had paid particular attention to the subject of this Memoir. Its publication was accidentally delayed; but it contains so many points of consideration, important at this moment, with reference to the value of the Collection, that it has been thought proper to add it to the Appendix of this Book.*

---

SIR,

January, 1815.

I HAVE learned with very great satisfaction, that, under the present circumstances of the country, an opening may probably now be afforded for the transfer of Lord Elgin's Grecian Collection to the British public. It is impossible not to feel the strongest desire that those precious remains of antiquity should become public property. In the hands of an individual, they might, even while united, continue useless; or they might be separated, and scattered. In

the possession of a liberal and enlightened nation, they must remain united; and, in conjunction with the other monuments of art which have already been collected in England, they must afford such means as no other country can possess, of bringing the imitative arts to perfection.

Under this impression, I have been led to turn my attention to the consideration of those circumstances which, if a treaty be entered upon, must influence the valuation of the acquisition. And proceeding upon the information already before the public, and on the considerations arising out of an acquaintance with the Collection, I feel desirous of submitting to you some observations which have occurred to me in the course of this enquiry.

The first and most striking reflection which presents itself, is, that this Collection, in the circumstances of its formation, bears no resemblance to any other that ever came before the public. At the period of Lord Elgin's embassy, some eminent artists in England recommended the object of it, as one of the highest importance to the improvement of the fine arts. It was proposed, as such, to Government. On their declining the undertaking, which then appeared of the most doubtful issue, his Lordship engaged in the pursuit, entirely at his own risk and expense. And securing before hand the most able assistants, in order to be prepared to turn to advantage any favourable conjuncture that might possibly come within his reach, he has succeeded, by unconquer-

able exertion and perseverance, in achieving what powerful and favoured sovereigns had, in successive ages, attempted in vain. And the public is now desirous to take the benefit of his exertions and success.

His Collection consists of:

1. Several of the matchless statues which adorned the Pediments of the Temple of Minerva, at Athens.

2. A number of the Metopes from the same Temple.

3. The whole remaining Frize of the Temple, of which about 250 feet is original, in marble: the remainder is in casts, executed on the spot.

4. Casts, also executed on the spot, of all the sculpture of the Temple of Theseus.

5. A great variety of fragments of valuable sculpture, from Athens, various in the subjects and their execution.

6. A complete Series of Architectural Drawings, containing the most accurate details of every building that can still be traced in Athens, or in the Peloponnesus, and restorations of all the most conspicuous edifices executed on the spot, in a style of the highest professional excellence.

7. Specimens of the most admired characteristics and embellishments of Architecture, such as columns, capitals, frizes, &c. &c.; many of these originals; others, casts taken from the buildings.

8. A very precious and numerous series of Inscriptions, comprehending many of considerable value to History, to Literature, and to the Arts. The Boustrophedon of Cape Sigæum, is in the number.

9. A number of Vases procured by excavations in the neighbourhood of Athens.

10. And a Collection of Medals; containing some of great merit and interest.

The value of such a property it is not easy to determine, for scarcely any rule or precedent can regulate it. Still there are various *data*, from which it may be inferred. The sums actually expended in forming the Collection; The advantage which might be obtained from the possession of it; The prices paid for, and value attached to similar possessions; And its absolute utility, in reference to national improvement in the Fine Arts, and in manufactures; each of these considerations comes severally to be regarded in fixing its value.

The amount of the expense incurred in forming this Collection might first be taken into view, the rather as it has, it seems, been suggested by very high authority, to be a fair and obvious arrangement, that the public should reimburse Lord Elgin's outlay; adding, moreover, such a compensation as the acquisition might appear to recommend. But to any one acquainted with Turkey, it must seem a very difficult matter to present expenditure of this sort, in any thing like a regular account, or to render intelligible, details arising exclusively out of the singular state of society in that country. It is indeed well-known, that Lord Elgin took six of the first artists from Rome, and employed them several years on this undertaking; and has now continued his establishment at Athens for 16 years. That

he had to remove these enormous quantities and masses of marble, nearly five miles from Athens to the Piræus, in a country without roads, without machinery, or any resource beyond manual exertion. That he had to convey them to England, to bring them from the outports to London; and keep them there at considerable cost. That he lost a valuable vessel of his own, employed in this service, wrecked off Cerigo, while having on board a number of these marbles, which he afterwards recovered with infinite labour, and at a great expense. But beyond these, and similar articles of stated outlay, it is equally well-known that no operations can be executed in Turkey, without the distribution of presents; which are always proportioned to the rank of the parties, and the eagerness or difficulty of the pursuit. And that, while Lord Elgin negotiated as Ambassador with the highest officers of the Empire at Constantinople, (the town of Athens being the jointure of the Sultan's mother,) his artists must have had to purchase the good will of the persons in authority on the spot, on every occurrence, wherever any assistance was wanted.

*Interest* on money advanced is very frequently above the legal standard of 12 per cent.; and *commission*, where shipping or other aid has to be provided, is often as high as the charge of interest.

In fact, there was in this instance nothing like a regular purchase. He engaged in a large expense, at a time when the prospect before him presented no

immediate hopes of success. He had to distribute great sums at a venture, frequently without any precise object immediately within his reach, and often without obtaining any specific return: so that it is difficult to consider Lord Elgin's outlay as decisive of the value of this Collection. He might have been more or less fortunate. But what was thus obtained, could have been procured by no other means; while Lord Elgin hazarded in the acquisition, a considerable part of his private fortune, under the certainty, that, if by the chances of war, or the accidents to which a long sea voyage is liable, losses had occurred, all that had been expended on the enterprise would have been sacrificed without remedy to him.

Another criterion for estimating this Collection, is afforded by a consideration of the profits which *might* be obtained by the possession of it.

If Lord Elgin could have reconciled himself to the dispersion, even in England, of those monuments, which it had been the labour of so many years to assemble, with what avidity would they not have been sought after, here and throughout Europe; with what eagerness would the treasures of British wealth have been poured out, for the attainment of monuments so precious and so interesting! It is but a few years since the sale of the Roxburgh Library afforded an opportunity for the display of that species of enthusiasm, which would have had a more legitimate motive, and a wider field of exertion at a sale of these marbles. On the occasion

alluded to, the most enormous sums were paid for books which had no value whatever, except rarity. But, were these more rare, or less attainable, than the works of Phidias? Does taste, or imagination, find less interest in the undisputed monuments of the age of Pericles, than in the rude attempts of Caxton or Wynkyn de Worde? It may be questioned, if such a competition has ever yet been excited on any occasion, as that which would have been called forth, by an opportunity to purchase even the least considerable of these invaluable reliques.

But the Collection must not be scattered. Its parts would certainly be most interesting and valuable; but it is only as a whole that it can be useful. To keep it together, will appear an object of national concern, to those who remember the censure which has been cast on our Government, for allowing even the Leverian Museum to pass into private hands, and to be broken down and lost.

Even in the hands of a private individual, however, the Collection may be preserved entire. In a country so fertile as this in speculations, there may be many persons to whom the acquisition of it would be desirable, entirely as a source of profit. The immense sums collected by different public exhibitions, are well known. At the exhibitions of the Royal Academy at Somerset House, the receipts have exceeded £1000. per week. At the British Gallery in Pall-Mall, upwards of £50. per day have been taken. At the exhibition of Mr.

West's first picture, it is said that £13,000. was drawn; and two separate offers, amounting each to the enormous sum of £10,000., have actually been made to Mr. West, for his last, for the purpose of exhibition. Other public exhibitions have been proportionally successful. It may be conceived, therefore, how attractive an exhibition of this Collection would be. Even under all the disadvantages of being in the possession of an individual, what numbers of persons flocked to see it! In fact, it would be an object of curiosity to every one. To people of general taste, it would present the highest gratification. By painters, sculptors, architects, modellers, and engravers, and by those who are employed in the useful arts and manufactures, it would be habitually resorted to, as a school for imitation and improvement. All whom even the most common education has made familiar with the illustrious names and events of Grecian history, would be attracted by the remembrance of that enthusiasm which these events were wont to excite. While those who are qualified to feel and admire the high eminence which the faculties of the human mind had attained in Greece, would view with peculiar delight, in these specimens of Athenian sculpture and architecture, a fresh instance, and a confirmation of that superiority. There can be no doubt, then, that an exhibition so interesting, (and which a few partial restorations, with the addition of views of Greece, and similar objects of general taste, would render so popular,) would speedily enrich its possessor.

But, if his Lordship had been disposed to offer the Collection to sale, other and more important competitors might have been expected to appear. The high estimation in which Canova, and the leading authorities on the Continent, hold these marbles, make it certain that they would, separately, or in whole, have been an object of desire to every Collector, and to every government in Europe, which aims at improvement in the arts of peace. They would be important, as a foundation for future Collections, in countries which have not yet begun to employ this method of improvement; as well as in those, which have been robbed of their most precious monuments, by an unprincipled and rapacious invader. But it is to the Gallery of the Louvre that this Collection would be chiefly invaluable. In it is assembled the greatest variety that ever was brought together, of rare and precious specimens of Sculpture in all its progress. But it is defective in what would ensure its utility, namely, enough of the productions of the best ages of Greece, to present an indisputable standard of perfection, and to form and establish a school. No doubt can be entertained for a moment of the truth of two prominent reflections: 1. That Bonaparte must have so appreciated the sculpture that was admitted by Phidias to decorate the first temple in Athens. 2. That he would have given any price to withdraw these from England. Powerful, indeed, must have been the determination in Lord Elgin's mind to preserve this Collection for his own country, when during above

three years of confinement and persecution, he would at any time have obtained his liberty, and any sum of money he had named, for ceding them to the French government. It was at that very period, that Bonaparte gave 12 millions of livres, (£500,000. sterling, for the Borghese Collection.

A third guide in a view to a valuation of the Collection, might be afforded by referring to the prices paid for property of a similar description, or the value annexed to it.

It must be admitted, however, that scarcely any materials of this description can be found to bear positively on the case now under consideration.

No Pictures of the Ancients have been preserved; nor has the method been ascertained which they used for securing durability in the colours. But there exists no doubt, that painting reached its highest eminence in the age of Alexander, soon after sculpture had attained perfection under Phidias. And it may well be presumed to have been superior to modern painting, in a proportion similar to what may be perceived in relation to sculpture. Still, the productions since the revival of the arts when the discovery of the fragments of the Torso sufficed to rouse all the energies of Michael Angelo's, and Raphael's schools, have become objects of very high value. The Orleans Gallery, for instance, was sold by the Orleans family at the commencement of the Revolution for £60,000. And soon afterwards £42,500. was paid in this country, for what was resold here.

The Agar Collection brought £31,500.; and as far as £8000. have been paid for single pictures.

In regard to Ancient Sculpture, there remain few statues original in all their parts, nor hardly any fragment, except the Torso of Michael Angelo, that has not been *restored*: whereas among Lord Elgin's marbles, none have been retouched in the slightest degree: whatever remains is indisputably original.

As to the Ancient Sculpture in the British Museum, the purchases from Sir William Hamilton at the price of £8,400., and from Mr. C. Towneley at £20,000., bear most directly on the present enquiry. These Collections have unquestionably the stamp of antiquity, and many of their pieces are exquisitely beautiful. Their history, however, is obscure, or unknown; while Lord Elgin's acquisitions carry us, at once, to that point in the History of the Arts, to which every student anxiously looks up. The Artist may hesitate to adopt a model, however beautiful, which bears not the stamp of authority. But he acknowledges the authority of those models, which have been fashioned with the chisel of Phidias. If, then, the Towneley and Hamiltonian Collections have always, and justly been considered of great value to the arts, how much more important are those, which are now within the reach of this nation!

The facilities which Lord Elgin's example has opened for further researches in Greece, have already led to some most valuable discoveries there. A series of sculpture of the Egina school, was sold by auction to the

Prince Royal of Bavaria. The frieze of the temple at Phygalia, has been purchased on the spot by the British government, also *at an open auction*, for £15,000.; amounting, under the circumstances of the exchange, to £19,000., besides the cost and risk of conveyance to England; while the actual expenditure, incurred in procuring it, did not exceed £3000. This bas-relief in its parts varies, as to workmanship, and state of preservation. The length of the whole is about ninety feet. Its sculpture presents a criterion of comparison with the frieze or the metopes in Lord Elgin's Collection.

In the Louvre, values are affixed to the more considerable pieces of sculpture and painting. One length, measuring 6 feet, of the bas-relief of the frieze of the Parthenon, of which Lord Elgin possesses nearly 250 feet, is rated at 80,000 franks—£3250. sterling. The Torso of Michael Angelo is estimated at 300,000 franks, equal to £12,500. sterling. And, since the renewal of intercourse with the Continent has freely allowed the means of examination, Lord Elgin may safely challenge a comparison on the score of truth, grace, choice of forms, expression of sentiment, and exquisite workmanship, between that fragment, and the Hercules, the Ilyssus, the Torso of Neptune, or the female groupes in his collection.

The *last*, and most important consideration, in reference to the value of his Lordship's Collection, is its absolute utility, in promoting national improvement in the arts and manufactures.

The importance of such Collections might be decisively inferred from the whole history of the world. It has been the ambition of every great nation, to excel all others in the Arts and Sciences. Such was the policy of the best ages of the Republics of Greece and Rome; and modern times afford examples, not less remarkable, of the operation of the same principle. Of these examples none is so memorable as that of Florence; which, by its splendid progress in the Arts, became, from a petty republic, a powerful state.

Lorenzo "the Magnificent" has immortalised his name, by creating that school, which, even in its infancy, produced Michael Angelo and Raphael. And such is the importance attached in France to the Collection in the Louvre, that while she execrated the usurper whom she had so lately driven from the throne, the retaining of these treasures with which his rapacity had embellished her capital, was marked in the King's speech on his accession, as a leading feature, among the advantages which the restoration of the Bourbons had produced.

The time has arrived when England also may found her school. She has it in her power to possess monuments, which surpass the richest treasures of Florence, of Rome, or of Paris; and to offer to the imitation of her artists, and to the admiration of all, the most perfect models of beauty, and the most useful exercises of taste. For the creation of a school, she possesses advantages, which have never been enjoyed in the same degree: she is wealthy, and she is *free*. Whatever

encouragements are offered to improvement by those rewards which it is the privilege of wealth to bestow, are afforded here. But, as the Patron of the Arts, her proudest distinction is her free government, which gives to the human faculties their fullest energies; and secures to every individual the most entire enjoyment of those advantages, which the exertion of his faculties can command.

It were endless to particularise the benefits which may result from the study of these inestimable models. I remember to have been much struck by the remark of one of the most eminent Artists in London, "that he never knew how much he had yet to learn in his art, till he saw Lord Elgin's marbles." The same Artist expressed an opinion, that, by bringing these monuments to Britain, Lord Elgin had advanced the imitative arts at least a century in this country. It is only an Artist who can entirely feel their value: but all who know any thing of the History of the Arts must admit the importance of the acquisition, when they reflect on the marvellous progress of improvement which spread from Italy, to the surrounding nations, almost instantly after the creation of the Florentine Museum.

Beside Sculpture, his Lordship's labours and acquisitions have been in an especial manner directed to the advancement of the Science of Architecture. From Athens, where that science had attained a perfection, a purity, a beauty never produced elsewhere, Lord Elgin has brought home, in the studies of the eminent archi-

texts he took from Rome, in original specimens, and in casts, the materials and the means of knowing and appreciating every characteristic which these remains could elucidate. And what country, in any period of history, ever presented in any degree, equal call and encouragement for the improvement in the science and taste of Architecture, as the works of the government, of public bodies, and of individuals of every rank, continually supply in great Britain?

The advancement of the Fine Arts, and the facility of studying specimens of acknowledged merit, has a peculiar claim to favour in a manufacturing and commercial country. We know what progress the potteries made on the introduction of Sir William Hamilton's vases. In fact, there is no manufacture, whether of utility or decoration, that would not derive great benefit, were the means of correcting general taste, and adopting the purest forms and designs, at all times accessible to the manufacturer and the purchaser.

It may surely be stated, as bearing upon the general prosperity of the country, and in exemplification of the advantage to be derived from this Collection, even in the point of view now under consideration, that the British Institution, that most meritorious association of the Patrons of the Fine Arts, so prized the first effort which the President of the Royal Academy made after studying several months in the Elgin Museum, (professing it to be the result of those studies) as to present him three thousand guineas for that picture; That

the public have so seconded this patriotic spirit, as to contribute, it is said, no less than £18,000. on the exhibition of it. And that £10,000. has since been offered for a subsequent work of the same distinguished Artist.
